

Profile

I have been working in the architectural industry since 2014 and since then have acquired my bachelors, honours and Master in Architecture. From those academic footholds I have gone on to work at multiple award winning design firms, from Peter Rich Architects to Ntsika Architects and many small and up and coming firms and architects in between. I've worked across the industry from residential low to high rise to community architecture to transportation architecture to clinics to even playgrounds. I have worked with a number of incredibly talented and knowledgeable people and still do to this day, as a qualified Architect running my own firm.

I am both an Architect and an Artist and those worlds overlap for my approach to design and life.

My aim is still to be an architect that continually improves, bringing harmony between aesthetics and functionality while working holistically with other professionals in the industry. I use each project as a chance to outdo the last and imbue them with a purpose and uniqueness that allows them to stand timeless.
